

Sport Press Box - College Park, MD

[CHALLENGE]

A University in Maryland was in need of a press box for their main soccer field. The catch was the press box needed to be set on the existing stadium decking and seats. Along with the modular needed to be able to support a press crew with equipment on the roof.

[SOLUTION]

To solve these issues Modular Genius engineered and installed a cantilever foundation system in order to accommodate the existing decking and seats. As for the roof, it was designed and engineered to meet a 150 p.s.f. live load and hold several people at one time.
