

Modular Early Childhood Development Center

[CHALLENGE]

A New Jersey school district was in need of a permanent modular pre-school building to move students out of the existing elementary schools in order to ease overcrowding and offer early education to a wider range of families.

[SOLUTION]

Modular Genius provided a 19,788 sqft modular building that contained 14 classrooms each with their own restroom, multiple offices, and a teacher lounge. The project was in the planning stages with the state for years, but was installed in less than 7 months after notice to proceed.
