

## Modular Laboratory Trailer

### [CHALLENGE]

The United States Military required space that would be used for the study and training associated with Home Made Explosives (HME). Occupancy of the building within 60 days was mandatory. Certain interior items needed to be explosion proof or non-acid reactive to maintain a safe working environment.

### [SOLUTION]

Modular Genius provided a 640 sqft Modular Laboratory Trailer in the short time frame that was required. A specialized fume hood, emergency shower, eyewash station, and cipher locks were installed for the safety and security of the building owners. Extensive cabinetry and surfaces provided ample work space for testing and training.
