

Temporary Modular Campus

Baltimore, MD

The Challenge

A public college-preparatory boarding school was in the middle of a transition and renovation of an existing campus, but needed an immediate campus on another piece of property. This campus needed to contain everything a traditional school would have; library, cafeteria, science labs, classrooms, and offices.

The Solution

Modular Genius built this customer a 25,000 square foot modular campus. This modular school included all the same amenities a traditional school would have. Modular Genius also connected all the separate buildings with traditional wood decks/steps/and ramps.
